

CHANGES IN ENERGY AND INFORMATION IN WATER SHOWN ON WATER CRYSTALS

The photographs showing water crystals are taken before and after revitalisation with AQUA SANATURA® technology. A water source used is the public water supply in the city of Olomouc.

Water from the public water supply has not enough strength (energy) to create a whole and harmonious water crystal. By this crystal, the water conveys the message that there is something wrong in it.

Drinking water provided by the public water supply in Olomouc is a mixture of underground and surface water, which has been chemically treated and then taken by a piping system for many kilometres. There the water is influenced by all the places it is flowing through as well as by unnatural forms of movements which it is forced to follow. This is the case of many urban public water supplies all over the world.

Harmonious symmetrical form and beauty of the ice crystal after the revitalisation in AQUA SANATURA proves that the water has undergone positive and healing processes through the revitalisation.

In cooperation with Hado Life Europe Research Institute in Lichtenstein we are able to visually convey the energetic and informational changes of water in our revitalisation units. Nowadays, the bio informational quality of drinking water is becoming a more important aspect for the final consumers and also a talking point for the specialists and general public. There is no doubt, that Mr. Masaru Emoto has discovered a new way of measuring the quality of water by photographing the ice crystals.
